

A low voltage solution to power any environment

Switch Lighting's low voltage solution is designed to revolutionise your lighting needs across a variety of applications. Our innovative range of DC input Constant Current drivers will empower you to run the entire spectrum of Switch Lighting's architectural lighting products on a low voltage system. This versatile solution is perfect for off-grid homes, motorhomes, marine applications, yachts, and expansive low voltage landscape environments.

Available in five different output currents – 150mA, 220mA, 300mA, 350mA, and 700mA – these drivers support a wide input voltage range of 9-36VDC, ensuring flexibility and adaptability for your project.

In off-grid homes, these drivers provide a sustainable and energy-efficient DC lighting solution, reducing reliance on traditional power sources, and minimising your carbon footprint.

Moreover, the capability to run Switch Lighting products, including our ZELA range, D-LIGHTZ and E-LIGHTZ on a low voltage system is particularly advantageous where low voltage solutions are required. With Switch Lighting's low voltage solution and DC input drivers, the possibilities for creating striking, energy-efficient lighting designs are virtually limitless, making it the ideal choice for any project.
